~~~~~TERMS~~~~~

STOVES AND RANGES.—Four months from date of invoice or five per cent discount for cash in 30 days.

VAPOR STOVES.—Sixty days from date of invoice, or two per cent discount for cash in 10 days.

REPAIRS AND MICA.—Net cash, 30 days.

All open accounts to be closed by note the first of each month. Notes may be prepaid with same deductions for cash discounts as on open accounts.

All bills payable in New York or Chicago par funds without allowance for exchange or express charges.

Claims for deductions must be made within ten days of receipt of goods.

All goods shipped by rail at buyer's risk of breakage, unless otherwise ordered.

After obtaining a receipt for goods "shipped in good order," our responsibility ceases, and claims for damage must be made on the transportation company.

Prices subject to change without notice.

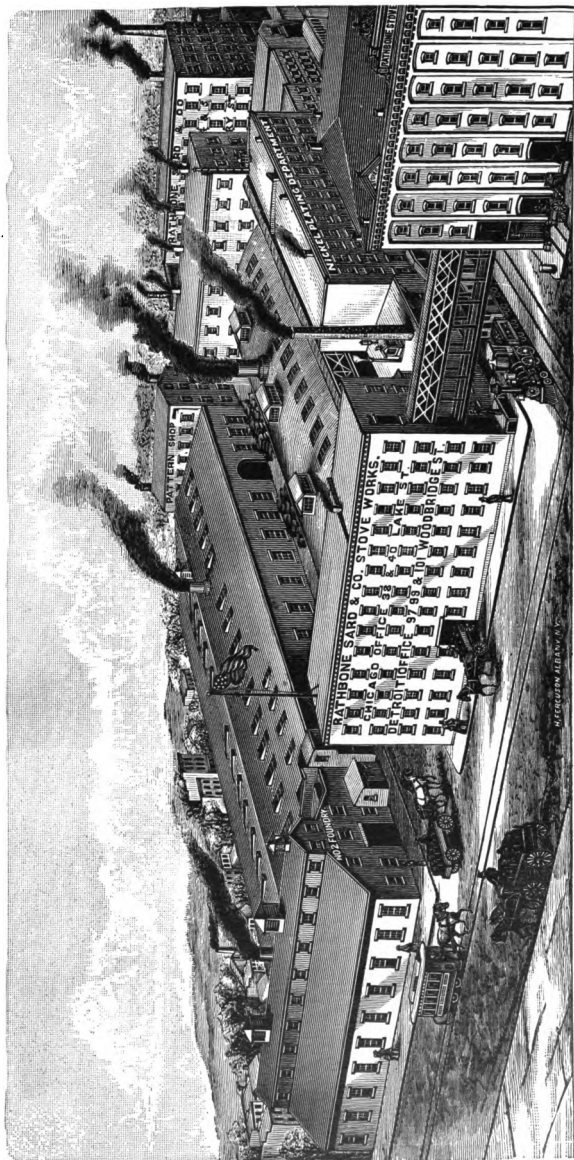

Our . Advertising . Bureau.

WE have always given especial attention to this department, and we have made it one of the rules of our business, to which may be attributed not a little of the success of the Acorn Line, that we should always be able to supply our customers with an attractive assortment of novel advertising material. We do not confine ourselves to printers ink, but have exercised constant ingenuity in getting up new things in novelties, new ideas in puzzles, games, &c., all calculated to be of sufficient interest in themselves to warrant their being preserved, and at the same time are efficient mediums for advertising Acorn Stoves and Ranges. To make a success in selling any line of goods, we believe it is necessary to advertise well and systematically. First, by prominent signs, indoor, outdoor, on telegraph posts, fences, barns, &c., &c., all calling attention to the Acorn Stoves and Ranges, and advising the passer by where they are to be seen. Then the dealer should be supplied with a large quantity of attractive circulars, stating what is claimed for the goods, and illustrating and explaining why the Acorns are better than any others. These circulars not only back up the dealer's statements, but they place all the arguments in a portable form to be carried home by the possible purchaser and made the family's study. The signs and circulars form the practical part of advertising, but a large amount of work is also done by the ornamental part, the handsome fans, beautiful lithographs, unique puzzles, and a host of taking novelties, all things that are valued and taken home by those who get them.

For the coming season we have a larger and finer assortment of free advertising material than we have ever had before. We furnish it liberally to all dealers handling the Acorn Stoves and Ranges, so liberally that they can thoroughly advertise their town with the merits of the goods they sell. By the help of this large amount of advertising the Acorn Stoves and Ranges can be made to become well known and sought after in any town where they may not have previously been sold, thus giving the dealer who takes the agency for the Acorn Line an established trade in a very short time. The merits of the goods themselves, assisted by the powerful aid of the extensive variety of advertising, will force the Acorn Line to the front in any town where an energetic dealer will undertake their sale.

Nos. 1, 2 and 3 Foundries, on North Ferry, Learned and Rathbone Streets, Albany, N. Y.

Three large Moulding Shops with four cupolas, capable of melting 100 tons of iron per day. To these are attached three five story Mounting Shops, large Nickel Works, Engine Rooms, Pattern Shops, &c., and with our two new foundries on Thacher Street form the largest plant in the world used exclusively for the manufacture of Stoves and Ranges.

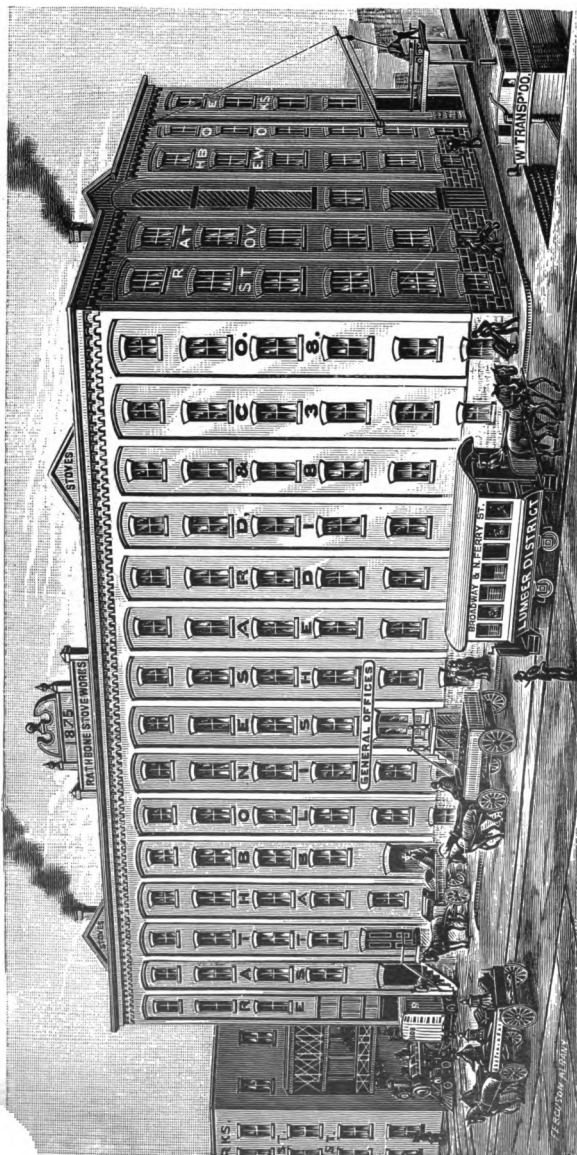

Nos. 4 and 5 Foundries on Thacher Street, Albany, N. Y.

These large foundries are late additions to the enormous plant now devoted to the manufacture of Acorn Stoves and Ranges. They are entirely new and are equipped with the most modern and approved appliances for stove manufacture. The two large Moulding Shops have cupolas capable of melting fifty tons of iron per day, and the mammoth mounting shop is arranged with the

Our New Foundry Plant at Aurora, Ill.

We have been for several months engaged in the erection of a complete Foundry plant at Aurora, Ill., of capacity sufficient to furnish all the goods required for our Western trade. This Foundry is now completed and in full running order. We now make Acorn Stoves and Ranges in the West, for the Western trade, and with our large manufacturing facilities at Albany, N. Y., we are able to turn out more Stoves and Ranges than can be furnished by any other two Foundries in the world.

Head Offices of the Corporation on North Ferry Street, Albany, N. Y.

This large five story building was erected in 1875, for the general offices of the Company, and for use as an additional warehouse for storage of manufactured goods. It is arranged with three elevators, car tracks on every floor, steam engine for hoisting, and every modern appliance for the facilitating of the enormous business of the concern. The D. & H. R. Rd. passes one end of this building, and has a side track running inside the warehouse, so that six cars can be loaded with ease each day. The Erie Canal is at the east end of the building, so that supplies received by water can be easily unloaded.

**Our Offices at the North East corner of Wabash Avenue and
Randolph Street, Chicago, Ill.**

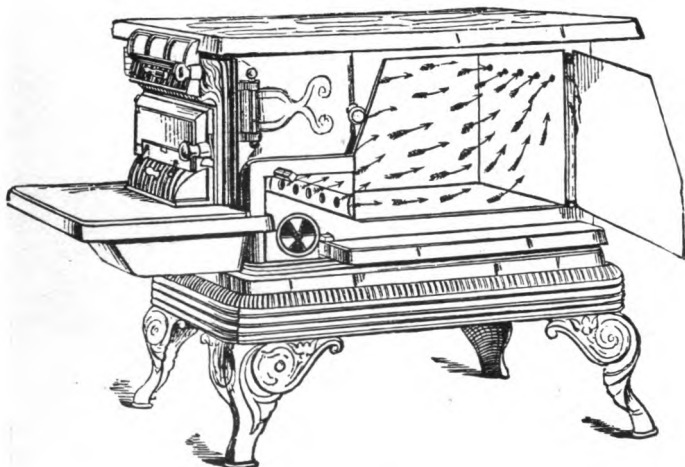

We have fitted up very elegant offices and large show rooms at this most central portion of Chicago, and here we should like to see our Western friends when they are visiting the metropolis of the West. Our sample floor is the largest of any storehouse in the city and enables us to show samples of every variety of Acorn Stove or Range suitable for the Western market.

Acorn . Oven . Ventilation.

TO cause a current of pure air to pass through the Oven during the process of cooking is found to make a wonderful gain in the flavor of the article cooked.

If this air is heated before entering the Oven, the gain in the cooking goes on without any loss of heat in the Oven, but if the air is cold (as in some constructions) the temperature of the Oven is lowered, and it requires more fuel to do the work.

The ACORN SYSTEM OF OVEN VENTILATION is different from all others, as the cut below will clearly show.

In the ACORN SYSTEM OF OVEN VENTILATION, pure air is admitted through the Wheel Damper to the left of the Oven Door into a Heating Chamber under the Fire Box. Here it is intensely heated and then passes into the Oven on a line with the oven bottom, through fine perforations, extending the full width of the Oven. At the opposite side of the Oven, at the upper portion, is a row of openings into the flues causing a suction, so that the air is put into motion and a constant circulation established in all parts of the Oven.

The Three Great Points of this System Are :

- 1st. The Air is heated before entering the Oven.
- 2nd. It enters at the Bottom of the Oven through openings, the full width of the Oven.
- 3rd. It passes off into the Flues, carrying away all smells and gases given off by the cooking.

With an Oven as fully ventilated as the Acorn Ovens, the same flavor is given to roast meat as if it was cooked before an open fire. The shrinkage in size and weight is reduced more than half, and the natural juices are retained instead of drying up as in an air tight Oven. Steaks, Chops, &c., can be broiled in the Acorn Ventilated Oven, by following the simple directions given, and all kinds of cakes, pastry and bread will bake quicker, lighter and be more healthful than in any other oven.

The Monarch Acorn Range.

FOR HARD COAL OR WOOD.

THIS is the first in the Acorn Line of Ranges, and is the very finest that we are able to make. In beauty of appearance, there is nothing in the market to approach it, it is of fine proportions, handsome design, perfectly mounted and fitted, and is most elaborately decorated with Nickel Panels on every door, three Tile in Oven Door, Nickel Name Plate on Reservoir Top, Nickel Shelves on back rail, and a very handsome Base, japanned and bronzed in the most effective manner.

The Monarch Acorn has Sheet Flues, rendering all six holes available and carrying the heat around five sides of the Oven.

The Oven is Ventilated by the Acorn System of Heated Air. (See page 10.)

The Fire Box has the Patent Dockash Grate, or the Anti-Clinker Grate, as ordered, and is lined with brick on all sides. By an ingenious arrangement, a loose plate is easily taken out from the side, and the Dockash Grate and frame can be removed and replaced without disturbing the Water Front, if one is in use.

The Covers and Centers are double and cannot crack.

The Direct Draft Damper Handle is outside the Range and cannot burn out.

The Reservoir is heated from the bottom by separate flue, and will boil quicker and last longer than any other.

The Hearth Plate is full width and draws out.

The Ash Pit and Ash Pan are of extra size.

The Edges are all burnished to a steel finish.

The Castings are smooth as it is possible to make them.

The Measurements are as follows :

The Imperial Acorn Range.

FOR SOFT COAL OR WOOD.

WE believe this to be the finest Range made for the use of Soft Coal or Wood. It was made with that intention, and we have tried to provide for every possible want, that our long experience with cooking goods for Bituminous Coal could suggest.

In the first place, it is large and heavy, we have not attempted to save in the weight, our object has been to make something that will last. All of the Covers and Centers are Double Lined and Ventilated; the Top Strip over the fire is Lined, and the Fire Chamber Plates are of double thickness and cast with heavy Knobs to ensure durability. The heavy front Fire Plate has a sliding, strengthening bar to prevent warping. The grate is hinged at the back and arranged to drop to the front by moving a handle that projects through the front. Our well known Top or Spout Feed is used; this is the best and cleanest system of feeding soft coal, as it gives a large opening and chute, and the smoke and dust cannot escape into the room.

The front Mica Door is hinged to swing to the left, and the upper half drops down for convenience in poking the fire.

The Oven is very large and nearly square; the back Oven Plate is corrugated and cannot burn out or crack; the Oven Door is opened by a Patent Pedal, and the Oven has our celebrated system of Oven Ventilation. The air is admitted through a wheel damper into a chamber under the Fire Box, and after being heated it passes into the Oven and circulates through every part of it, then is drawn off into the Flues, carrying with it all gases and odors given off by the cooking.

The broad, flat hearth draws out its full width and uncovers a large Ash Pit and Ash Pan. The Flues are of the Sheet Flue principle, are very large, and are cleaned by a most convenient method through the Ash Pit. The direct draft damper opening is of good size and directly in connection with the Fire Box, and the Damper Rod and Handle is outside the Range and cannot burn out.

THE IMPERIAL ACORN RANGE is very finely trimmed with Nickel Panels on every door, Three Tile in Oven Door Panel, Nickel Name Plate on Reservoir end, Nickel Outside Oven Shelf, Nickel Lifter, Shaker, &c., and a very handsome Base in black and gold.

The * National * Acorn * Range.

FOR HARD OR SOFT COAL OR WOOD.

THIS well known and popular Range has now been on the market for many years, and it has forced its way into the front ranks as the best six hole Range to be had anywhere. Its sale has increased year by year until it is now sold in every town of any importance in the country. It has become the recognized standard for a perfectly moulded and mounted Range, and the smoothness of the castings and exactness of the fitting have become proverbial.

THE NATIONAL ACORN HAS THREE GREAT SPECIALTIES :

- 1st. The Acorn System of Oven Ventilation**, admitting only heated air, carrying off all the gases and odors, and rendering the heat in the oven uniform by circulation.
- 2d. The Acorn System of Sheet Flues**, surrounding the Oven on five sides, resulting in quicker work with less fuel than by any other flue system.
- 3d. The Patent Dockash Grates**, by which the fire can be cleared of ashes in one minute, and enabling the fire to be retained for months without rekindling.

These three special features have rendered the NATIONAL ACORN RANGE famous, and its sales number many thousands each year.

In addition the NATIONAL ACORN has many other points of superiority over any other Range, briefly as follows :

- The wide, flush Reservoir Top**, giving the largest Top Surface of any Range.
- The Double Covers and Centres**, Ventilated and Practically Indestructible.
- The large Direct Draft Damper**, opening direct from the Fire Box.
- The Outside Damper Handle**, cannot burn out, and always easy to use.
- The extra large Ash Pit**, and largest Ash Pan made.
- The simple arrangement for taking out the Dockash Grate and Frame**, so that it can be removed if a Water Front is in use, without disconnecting the Water Front.
- The beautiful Nickel and Tile Panels and New Cup Door Handle.**

To properly appreciate the NATIONAL ACORN RANGE, it is only necessary to see a sample, it will be admitted at once, as the best Range made anywhere, and possessing so many good talking features that it is the easiest seller that any dealer ever handled.

For the convenience of those, who, in wood burning sections, need a Range with one extra large hole, we can furnish the large size NATIONAL ACORN with a Dairy Top.

The · Capital · Acorn · Range.

FOR HARD OR SOFT COAL OR WOOD.

THIS is our medium grade six hole Range, and in its new and elegant dress it will become one of the best selling Ranges we have ever made. We have added to it this season, wide polished edges in place of the plain rounded ones, large Nickel and Tile Oven Door Panel nearly covering the entire door; our new Nickel Cup handle which cannot become loose and always remains cool, and new ornamental Outside Oven Shelf with wide polished edges.

Its · Practical · Selling · Points · Are :

- 1st. **The Acorn System of Oven Ventilation**, admitting heated air to the Oven and carrying off all gases and odors into the Flues.
- 2d. **The Acorn System of Sheet Flues**, passing around the Oven on Five Sides, and by turning a Damper, carrying the heat under the Reservoir and then under the Oven, so that Boiling and Baking can be done at one time.
- 3d. **The Patent Duplex Grate**, giving a deep Fire Box, easily cleaned and by reversing the Grate, making a solid Grate for burning Wood. For those preferring it, we can supply a Dockash or a Flat Anti-Clinker Grate.
- 4th. **The Flush Reservoir Top**, giving extra shelf room.
- 5th. **The Method of Removing the Patent Grate** without disturbing a Water Front if in use.
- 6th. **The Drawout Hearth Plate** to hang on pins in front.

The Capital Acorn Range is the finest Range for the money ever made. It is full size and full weight, very attractive in appearance and a sure worker every time.

The • Duplex • Acorn • Range.

FOUR HOLES.

FOR HARD OR SOFT COAL OR WOOD.

First-class four hole Range, made in four the attachments of a six hole Range, such as, Reservoir, Water Front, &c. designed for that large class who do not require six holes at the same time, who prefer the Range connected with the Cook Stove.

Of this Range is the finest ever seen in this class. The patterns are covered with the handsomest carved ornamentation; the Oven Door has a massive Nickel and Tile Nickel Cup Handle, and the finely polished edges, superb mounting and fitting, place this Range away out of the reach of any competition.

THE DUPLEX ACORN is not only the handsomest Range of its class, but it has more strong selling features than any other. It has

THE ACORN SYSTEM OF OVEN VENTILATION,

Through Wheel Damper into a heating chamber, then into the Oven, and after circulation, is drawn off into the Flues, carrying away all odors and gases.

THE ACORN SYSTEM OF SHEET FLUES,

Enveloping the Oven on five sides, producing the quickest draft and most uniform heat of any system. By dropping the Reservoir Damper, the heat can be made to pass under the Reservoir, and then under the Oven, so that the water in the Reservoir can be made to boil whilst baking is going on.

THE PATENT DUPLEX GRATE,

Giving a deep Fire Box, easily cleared of ashes, and enabling the fire to be kept in continuously.

THE FLUSH RESERVOIR TOP,

Full width of Top Plate, so that the top surface of the Range is larger than many six hole Ranges.

THE OUTSIDE DAMPER HANDLE AND ROD,

Cannot burn out or become warped.

For Soft Coal this Range has our well known Spout Feed and heavy Cast Linings.

For Wood, it has extended Fire Box and a full set of Wood Fixtures.

The Pacific Acorn Range.

FOR WOOD.

WITH EXTRA LARGE OVEN.

THIS is an entirely new set of patterns, and is intended for the finest Wood Range that has been constructed so far. In appearance it is far superior to anything in the market, and in the details of construction nothing has been omitted that could in any way add to its value. The PACIFIC ACORN has sheet flues, giving direct heat to all six griddle holes and passing around the Oven on five sides ; by dropping a damper the heat passes under the Reservoir, enabling the water to be boiled in 20 minutes, and at the same time as the Oven is in use. It has wide polished edges, handsome base, direct draft damper operated from the outside and cannot burn out, fire backs warranted to last fifteen years, an extra grate in hearth for broiling, and handsome low pipe shelf with check damper.

The Oven is perfectly ventilated through the Nickel Panel, and the impure air drawn off into the flues. The Reservoir Top is flush with the top of the Range, and the front edge is polished and on a line with edge of Range. The Hearth Plate draws out and drops down to hang on pins. The wood burns on loose wood grate. The covers are heavy, and the Centre Top is cut. The Reservoir is much larger than that of other Ranges of this class, and the Reservoir Top is handsomely decorated and japanned. The Nos. 71-24 and 81-24 Pacific Acorn can be furnished with Low or High Warming Closets and Pipe Shelves in place of low pipe shelf to fit all sizes.

The Fire Box is arranged for the Pipe Water Backs, and Fixtures for burning coal can be supplied for all sizes of this Range.

THE DECORATIONS AND TRIMMINGS ARE :

Very large Nickel Panel with Tile Centre on Oven Door.
Nickel Outside Oven Shelf.
Nickel Towel Bar.
Nickel Handles, Knobs and Hinge Pins.
Wide Polished Edges.
Patent Oven Door Opener.

This is the very finest and best working Wood Range that has ever been made, and dealers would do well to put in samples as early as possible.

The Iron Acorn with Reservoir and Closet has a very large Reservoir heated from the bottom, so that if there is enough water in the tank to cover the bottom, the Reservoir cannot burn out. The Warming Closet is extra large and has doors on each side and a large Drop Door at the back. The Flues are cleaned from under the hearth plate and by taking out a loose plate in the bottom of the ash pit, all refuse can be drawn into the ash pan with ease.

The Iron Acorn is acknowledged as the standard for first-class Cooking Stoves. It has been improved this season by adding a new Carved Base, two inches higher than the former pattern.

THE IRON ACORN.—Standard Grade.

Nos. 71-18, 81-18, 81-20 and 91-20. Square Top. For Soft Coal or Wood.

This Stove can be furnished in three ways, as Plain Top only, or with Reservoir only, or with Reservoir and Closet.

This is our latest pattern of Coal Cook, with smooth rounded edges and heavy raised ornamentation. There is no Nickel work on the Stoves with the exception of the Door Handles, but the quality of the Castings is so fine and the Carved ornamentation so artistic that the Stove when blacked is as handsome as any, and at a much lower price than extravagantly Nickered Stoves.

The · Regal · Acorn.

FIRST CLASS WOOD COOKING STOVE.

THIS is our leader in Wood Cooks, the finest and best that we make, and we point to it with pride as the highest type of Cooking Stove ever made.

In size and proportions, it attracts attention at once; its rich Carved Ornamentation, Broad Burnished Edges, elegant Nickel Panels and Artistic Tiles, combine to make it the most beautiful piece of kitchen furniture ever turned out of a foundry.

In construction, we have aimed to make it the perfect Cooking Stove for Wood, as the following list of its practical features will prove:

The Oven is large and high, of extreme width on the upper slide and of unusual height under the Fire Box.

The Fire Box is long and wide, it has a heavy front Swinging Grate, loose Bottom Grate arranged to open and close by a Nickel Handle projecting through the front and the back linings are sectional and very heavy.

The Flues are large and are cleaned from the front through a hinged flue door.

The Covers and Centers are double and ventilated, and the center top is in two pieces.

The Hearth plate draws out and hangs on pins.

The Rods and Damper Handles are outside of the stove and cannot burn out.

OVEN VENTILATION.

The Oven Doors have large Nickel and Tile Panels, with a sliding damper to admit pure air to the Oven whilst baking. The air passes between the door and the lining, and after being heated, it enters the Oven at the bottom, circulating through the Oven it passes into the Flues, carrying away all gases and odors given off by the Cooking.

The wonderful gain to the food cooked, both in improved flavor and the saving in weight, will always render a Ventilated Oven far superior to a close one.

For Coal	13 50	18 50	27 00	32 50	37 50

Our improved Farmers' Boiler has this advantage over all others: that, by the use of a damper at the back, the heat is made to pass entirely around the kettle before passing into the pipe. This necessarily insures quicker boiling, without any extra consumption of fuel.

The . Acorn . Art . Parlor.

FOR HARD COAL.

A FIRST-CLASS SQUARE BASE BURNER.

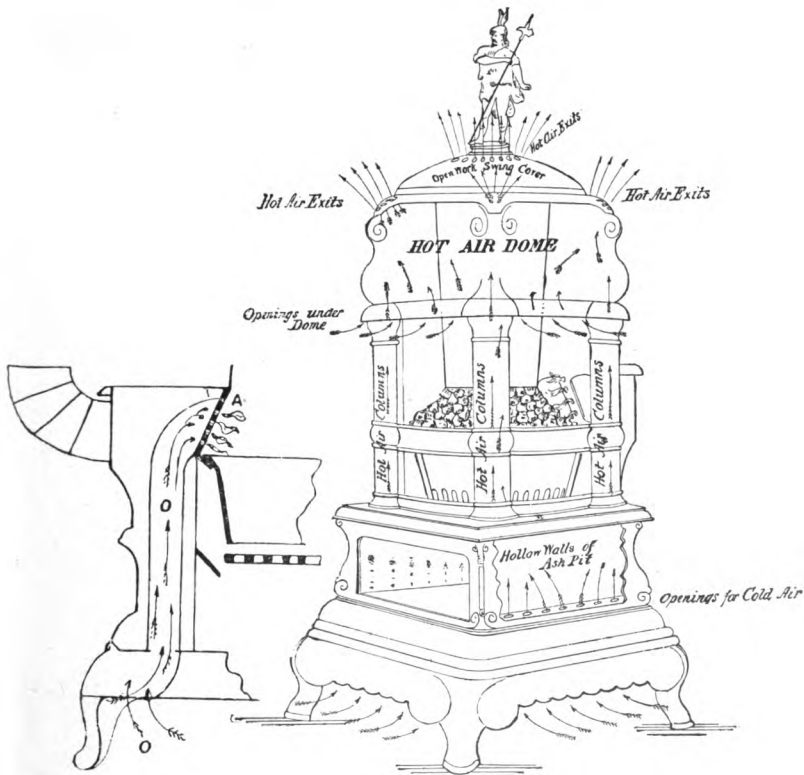

THE ACORN ART PARLOR stands far in advance of all other Stoves of this class, not only for its magnificent proportions, beauty of design and richness of decoration, but also for its extraordinary heating powers. As is well known, this Stove was constructed specially with a view to embodying in its most perfect and practical form, the correct principles of Hot Air Circulation. The Stove was built for this, and not, like many others, added to as an afterthought, and a glance at the diagram cut on page 73 will show how thoroughly the plan has been carried out. Modern experience in the science of Stove making has taught the trade that in order to get the greatest amount of heat from a Parlor Stove, the radiating powers from Fire Pot and Flues, must be assisted by a proper application of the Hot Air Circulation Principle, and in the ART ACORN this is carried out in a more perfect manner than in any other Stove. The result is a considerable saving in fuel, and a more uniform heat obtained in all parts of a room.

The inside construction of this Stove is the same as has been proven so successful for many years in our first-class Base Burners; large round Fire Pot to revolve at will, Shaking Draw Center Grate, very large Ash Pit and Ash Pan, Ventilated Magazine with a new inside Cover, fitted most perfectly to prevent escape of gas or burning up in the Feeder, and very large Flues extending to front of Base.

The outside appearance is, without doubt, the handsomest ever seen on a Stove of any kind; the large Nickel and Tile Dome can be easily removed; the handsome Front and Panels, large Carved Base and elaborate Rails and Brackets, are Polished and Nickeled in a style never before approached in this line.

THE ACORN ART PARLOR.

Hot Air Circulation and Ventilation.

The Ventilation Pipe.

The opening *O* below the base leads into a pipe extending up the back flue and into the fire chamber at *A*. The foul air which, as is well known, always settles to the floor of a room, is drawn up this pipe and by this means the room is ventilated, and the mixture of the air with the fuel improves the combustion.

The Hot Air Circulation.

On the principle of a Hot Air Furnace, the cold air is drawn into openings in the bottom of Stove, and after passing between the walls of Ash Pit, circulates through the large Columns at each corner of the Stove and into the Hot Air Dome immediately over the Fire Chamber. It thus becomes intensely heated and is discharged into the room through the openings into the top of the Dome. The Corner Columns are each $2\frac{1}{2}$ inches in diameter, and the amount of air in constant circulation is estimated at about 3,000 cubic feet in every 15 minutes. By the change of one plate in the Dome, a perfect Double Heater for heating upper rooms can be made from this Stove.

The ♦ Royal ♦ Acorn.

THIS elegant new set of patterns is designed as the very latest style of first class Base Burner for Hard Coal.

It has the extreme Swell Front, High Dome, Mica Sections and Curved Nickel Upper Panels, and is the most brilliant Stove under fire ever seen. The large amount of Mica illumination gives this Stove the brightness of an open fire with all the economy of combustion of a high grade Base Burner. There are more specialties embodied in this Stove than in any other one Stove, and its good features, combined with its good looks, will make it the most popular Parlor Stove of the season.

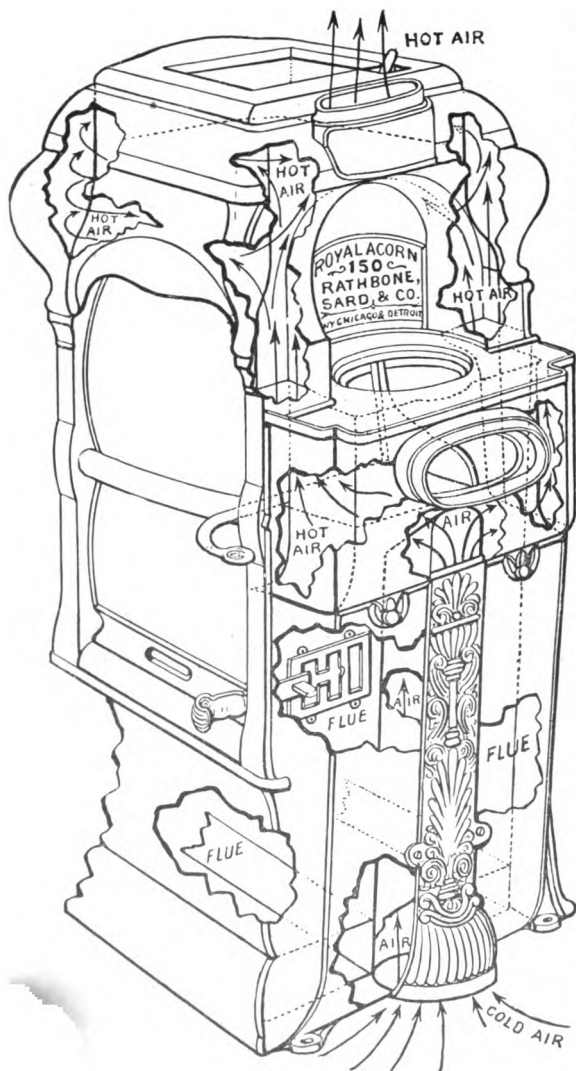

Some of its More Prominent Features Are:

- 1st. The Fire Pot can be removed through the front of the Stove by simply removing two bolts.
- 2d. It has the Duplex Grate with Shaking Ring, and this is easily removed and a Draw Center Anti-Clinker Grate substituted when desired.
- 3d. The Stove is set on Legs and the Base Skirting is fastened to the Legs, this means that one man can set up the Stove.
- 4th. The Automatic Feeder Cover lifts up when the Swing Cover is opened.
- 5th. The Mica Doors require no drilling — if one is broken a new one can be set on without the use of a drill.
- 6th. All the Nickel is easily taken off to black the Stove.
- 7th. All sizes are Double Heaters, if desired, all have the most powerful Hot Air Circulation, free from dust or gas.
- 8th. The Magazine is well ventilated and cannot explode, condense or ignite.

This beautiful Stove is the most graceful in outline, and the most handsome in decoration that we have ever made, and we must urge our customers to get in their orders early to assist us in avoiding delays when the busy season comes.

THE ROYAL ACORN.

HOT AIR CIRCULATION AND DOUBLE HEATER.

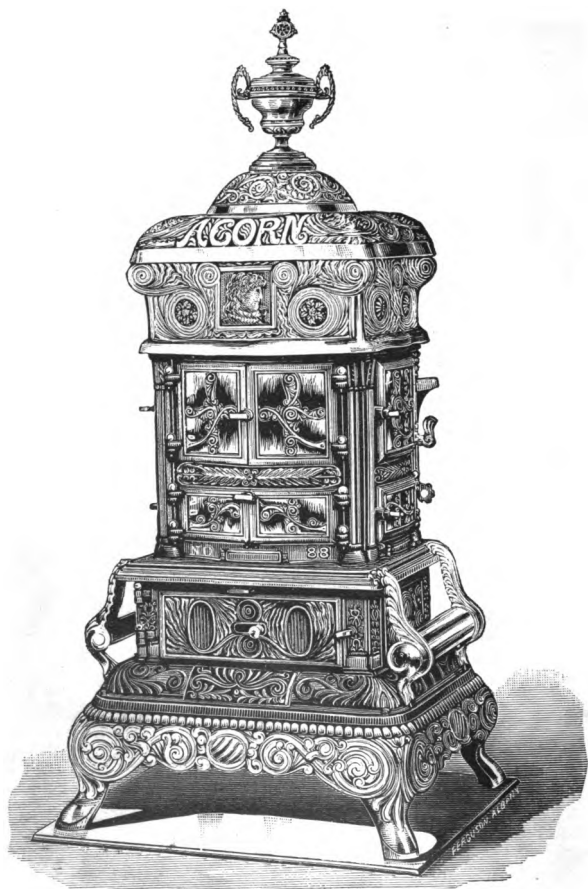

THE method of hot air Circulation in this Stove, it will be seen is different from that of any other Stove. The general criticism on the plan of carrying pipes with joints, *inside* the Stove, is that after the stove putty burns out, gas and sometimes dust will draw into the pipes, and so into the Double Heater System. In our plan, we have all our pipes *outside* the Stove without any joints, and there is no possible connection by which gas or dust can get into the hot air circulation. The back outside flue plate is cast in one piece, with a deep channel or groove between the up and down flues. A plate bolted outside of this with a bell shaped opening at the bottom, makes a pipe to carry air, and by joining to another plate, it is brought up into the dome and circulates into the room through the open register in the dome top. By adding a collar, we furnish when ordered, a double heater pipe can be attached to the top, and a perfect Double Heater made of every size of this Stove. An Elbow is also furnished to attach to the bottom of the Hot Air Pipe, so that a connection can be made with the outside air, if desired.

A low-priced Direct Draft, Self-Feed Parlor with large Nickel Panels, Bronze Figure, double row of Mica Doors, large Ash Pit and Ash Pan, Nickel Knobs and Rail, and each Stove has a Tea Kettle Attachment on the back.

The Fire Pot and Magazine are very large for this grade of Stove and it is a very powerful heater.

The . Western . Acorn.

FOR SOFT COAL.

A REVERTIBLE FLUE SQUARE PARLOR

AFTER two years' experience and the sale of many thousand, the WESTERN ACORN is pronounced an unqualified success as a Revertible Flue Stove adapted to burn any kind of fuel, including the cheapest grades of Soft Coal.

It is artistic and graceful in outlines, richly decorated with Nickel and Tile Work, and is, without question, the handsomest Parlor Stove ever made for this fuel.

The construction of this Stove has been undertaken with the utmost care, with the determination to avoid the many complaints and failures that Soft Coal Revertible Flue Stoves have experienced in the past, and some entirely new features are embodied in this Stove, and which render it a marked success.

The coal is fed from the top into a hopper, and after closing up the top, the hopper is opened by turning the Nickel Handle on the outside, and the coal falls into the Fire Chamber. By this means we overcome the objections to most Soft Coal Stoves of the escape of smoke and soot into the room when fresh fuel is added.

The Flues pass down the back and around the base and then return to the top of the Stove, throwing out double the heat of an ordinary direct draft Stove.

The fire is under perfect control, a large Check Draft in front and another in the back flue will render it easy to hold fire all night.

The heating power is greatly increased by the large Hot Air Circulation Pipes, extending from the base to the top, and drawing cold air from the floor to be heated and circulated into the room.

The durability of the Stove is its strong feature, all plates exposed to the fire are doubled and ventilated, the Fire Pot is of extra weight, the bottom of Ash Pit is lined, and there is no point overlooked in adding to the strength of the Stove.

The Mica Doors are doubled with an inner wall of perforated metal, so that the air can be admitted to the fire without danger of smoke escaping.

The WESTERN ACORN has Bronze Top Ornament, Nickel Swing Cover, Nickel Front Panel with three Tiles, large Nickel Rails and Brackets and handsome Nickel Carved Base.

THE WESTCHESTER.

FOR SOFT COAL.

A Surface Burning, Revertible Flue Stove.

	Cipher Code.	List Price.
No. 33. With Rail and Plain Base.....	Wealth,	\$23 00
44. " " "	Weaver,	26 00

This Stove is constructed with special reference to the perfect combustion of Soft Coal. The Fire Pot and Grate are very heavy, and the Flues are of large size and easily cleaned. The Pipe Collar and Damper are above the Feed Door, so that no smoke will enter the room. The Feed Door is so arranged that the direct draft damper automatically opens when coal is put into Stove, therefore allowing the smoke to be drawn directly into the chimney. The Stove is well made, with Spun Brass Nickered Urn, Nickel Rail, Knobs and Turn Buckles, and can be recommended as a perfect working Soft Coal Stove.

Furnished with Brick and Iron Linings as desired.

This All-Cast Cylinder Stove is a grade higher than most Stoves of this class. It is constructed from our own patterns, and is much heavier and more substantial than competing Stoves. The Handsome Nickel Panel in front is an improvement. The Heating Capacity is increased by the system of Cold Air Flues between the Fire Pot and body of Stove. It has Spun Brass Nickleled Urn, Nickel Panel, Knobs and Rail, wide Polished Edges, very high Ash Pit Section and large Ash Pan, Shaking and Dumping Grate, and Double Mica Doors.

This is a modern style Cylinder Stove, with large, square Ash Pit Section, Swing Top with Inside Cover and large Mica Door. It is heavier and more substantial than most Stoves of its class.

The · Eastern · Acorn.

SURFACE BURNER FOR HARD COAL.

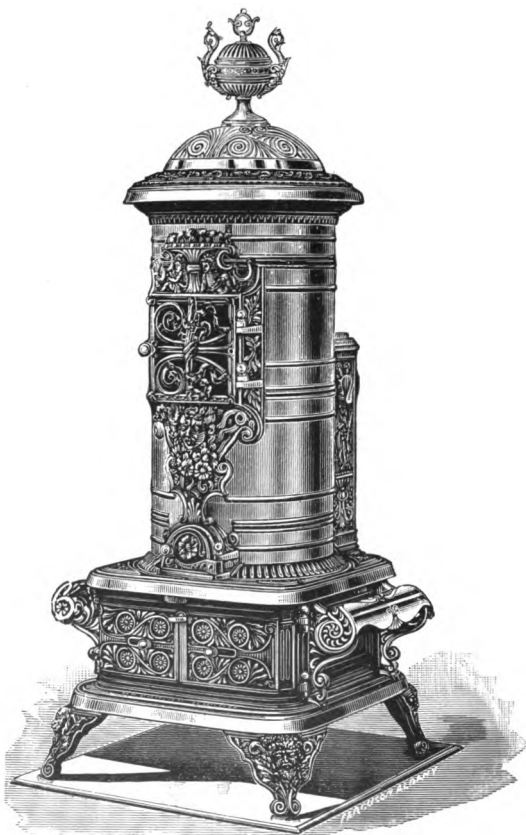

FROM its construction, the EASTERN ACORN is acknowledged to be the most powerful heater of this class of Stoves. The large size of the Fire Chamber, with its direct radiation from the body of the Stove, in addition to the great heating power of the outside flues which pass down the back and around the Base, make this Stove a greater heater than one two sizes larger of any other construction.

The EASTERN ACORN has been greatly improved in appearance, by the addition of a large Nickel Dome Top and a handsome Top Ornament in Nickel and Polished Copper. The beautiful carved front with large Feed Door, and the attractive Ash Pit Section, with Nickel Side Rails and Brackets make this one of the most ornamental Stoves of its class.

The great heating power is derived from the peculiar construction of our Fire Pot and Flues. The Fire Pot is full size of the sheeting with Brick Lining, and the Flues are carried out at the back and under the bottom, exactly similar to our first-class Base Burners. The advantages of this in a Surface Burner, is that the body of the Stove becomes an intense radiator of heat, in addition to the heat thrown off from the flues at back and base. Thus greater heat is obtained with a Stove of smaller exterior diameter than is possible with any other system of flues. We would ask comparisons with the measurements of our Stove with any other on the market.

	Nos. 108, 128, 148, 165, 185.				
Diameter inside Brick ...	10	12	14	16	18 inches.
“ “ Sheeting	12	14	16	19	21 “
Ash Pan.....	12x13	15x16	16x18	19x20	22x24 “

We furnish the Stove mounted in sheet iron or in castings ready to mount. The dealer who prefers to make the sheeting will find this an easy Stove to mount as the Flues are of cast iron and are furnished with the Stove.

THE ÷ FLORAL ÷ ACORN.

A SQUARE ART PARLOR FOR WOOD.

DIRECT DRAFT AND REVERTIBLE FLUE.

THE FLORAL ACORN is our highest grade of Parlor Stove for burning wood. It is made in two sizes, and both as Direct Draft and Revertible Flue Stoves.

In outline and ornamentation it is the most beautiful set of patterns that has ever been seen for a Wood Parlor, and in working qualities, the construction of the stove renders it the cleanest, easiest to operate and best heating stove of this class on the market.

The wood burns on a new form of grate, arranged to open and close by moving a handle on the outside, the fire can, therefore, be easily controlled. The centre of the grate draws out to let ashes fall into the large ash pan. A check damper slide in the Revertible Flue Stove, enables the fire to be kept in over night with ease.

The Revertible Flue Stove has flues in the two front corners carrying the heat down to the base, it then passes to the back and up the broad back flue to the top of the stove. When feeding fuel to the stove, the feed door automatically opens the direct draft damper so that the smoke cannot escape in the room, but passes into the pipe.

The decoration of the stove is very rich, consisting of a Beautiful Silver and Copper Top Ornament, large front Nickel Panel with three tile, Nickel Name Plate full width of Top, Nickel Side Panel and Door Latch, very heavy Nickel Rails and Side Pieces, and full set of Nickel Knobs and Hinge Pins.

The FLORAL ACORN is the handsomest and best working Wood Parlor Stove made, and has been copied more extensively than any other stove of modern times.

A round Revertible Flue Wood Stove with large Feed Door, heavy Cast Linings, Double Bottom and Handsome Base.

This Pattern, in another dress, has been before the trade for 25 years, and was the pioneer of Revertible Flue Stoves. Its reputation stands so high that we have embellished it with more modern ornamentation, and preserving its sterling qualities as a heater, offer it to the trade as a first-class Wood Parlor.

THE NEW FOREST ACORN.

Base Heater.

With Full Nickel Trimmings, add \$2.00 extra.

The Acorn Oak can be furnished with Cast body as on page 119, and both styles are also furnished with Hot Air Circulation Pipe as on page 120 when ordered.

The Acorn Oak is intended to be the finest Oak Stove made. The Castings are as smooth as it is possible to make them. The mounting and fitting has never been excelled. The Sheet Steel body is the highest grade of this metal that is manufactured. The proportions of this Stove, the handsome Nickel Trimmings, beautiful carved ornamentation and the fine surface of the castings, place this Stove far ahead of any competitor.

A Nickel Swing Cover, Nickel Top Ring, and Nickel Name Plate are furnished with this Stove, at an extra cost, when ordered with full Nickel Trimmings.

The Acorn Oak can be had with Sheet Steel Body as on page 118, or with the Ventiduct Hot Air Circulation as on page 120.

This Stove with its beautiful Cast Side Panels and its full Nickel Dress is the handsomest Oak Stove ever made. It is fit for any parlor in the country, and is as ornamental as a high-priced Square Base Burner. The mounting and fitting are as near to perfection as it is possible to make them. The smoothness of the castings, and richness of ornamentation render this Stove far in advance of any previous attempt at an Artistic Oak Stove.

When not ordered with Full Nickel Trimmings, we omit the Nickel Swing Top, Nickel Top Ring, and Nickel Number Plate.

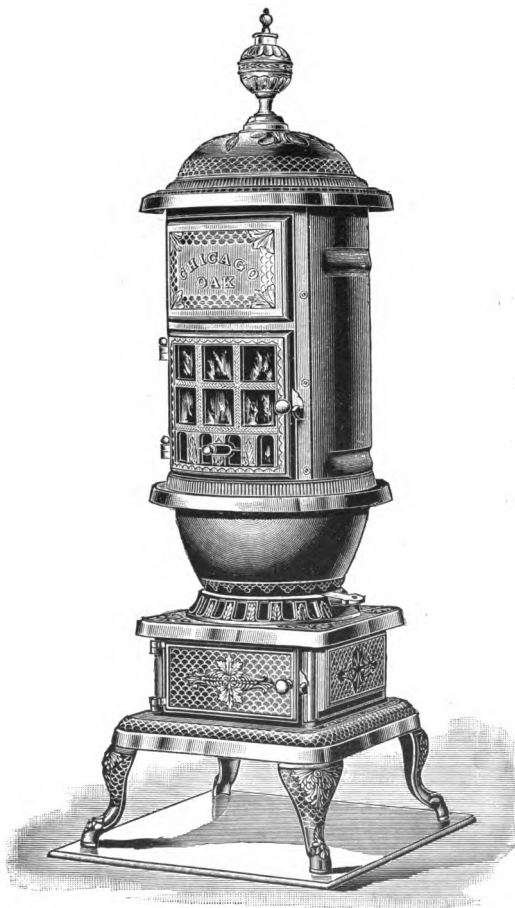

THE VENTIDUCT ACORN OAK.

Mica . Price . List.

AS there are only a limited number of sizes of Mica that are in demand by Retail Stove Dealers, we have made up a series of assorted packages of the sizes that are most likely to be used for repairing our own and the leading makes of Stoves on the market. By purchasing an assorted package, the dealer obtains the advantage of receiving a small quantity of a number of sizes, and which will enable him to repair nearly every style of Stove that will be called for, and the price for the package is as low as if the Mica was bought in larger quantities.

The quality of the Mica we have handled for so many years is too well known to the trade to require any commendation from us. We have special facilities for securing some of the clearest and toughest Mica that is mined, and in purchasing so largely for our own use, we are enabled to obtain it at such figures that we can supply our customers at considerably lower than market rates.

ASSORTED PACKAGES — 1st Quality Mica.

One pound assorted, 4 sizes, \$3.00.

$\frac{1}{4}$ pound each, 3x3, 3x4, 3x4 $\frac{1}{2}$ and 4 $\frac{1}{2}$ x5 $\frac{1}{2}$.
